# CHILDREN LEARN ABOUT

## ANIMALS

Promote various approaches to learning about nature

## PLANTS

Develop a sympathetic, respectful and responsible attitude towards animate and inanimate nature

## OBJECTS

Learn about technical objects and develop skills in technique and technology

## PHENOMENA THAT OCCUR AROUND THEM

Experience and learn about animate and inanimate nature in all its diversity, connectedness, constant changing and aesthetic dimensions

## LIVING BEINGS

Learn about their bodies, the life cycle, and a healthy and safe lifestyle

# KINDERGARTEN SIENCE OUTSIDE AND INSIDE

They subject substances and objects to mixing, heating, cooling, cutting, moistening, dissolving, bending, illuminating, etc. to learn about how they change.

They learn about changes that occur in nature and in people's lives depending on the season.

They focus on the movement of a thing and observe when and how it moves or does not move. At the most basic level children can perceive energy as something we need for things to move, run, happen or change.

## EXPERIMENTING WITH WIND - windmill

## ACTIVITIES FOR CHILDREN

### EXPERIMENTING WITH WATER

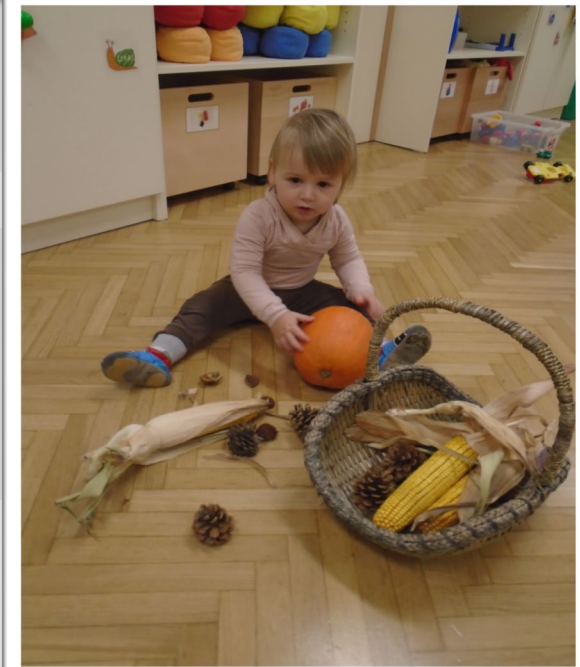

# SAND EXPERIMENT
